PROFESSIONAL SUMMARY

Versatile and detail-oriented professional with extensive experience supporting complex business environments, coordinating cross-functional initiatives, improving operational processes, documenting organizational knowledge, and developing practical solutions to day-to-day challenges.

Known for combining strong communication skills with analytical thinking, structured planning, and an ability to work effectively across departments. Experienced in translating ambiguous requirements into clear processes, coordinating stakeholders, maintaining documentation, and helping teams adopt more consistent and measurable ways of working.

Strong background in organizational planning, technical documentation, business analysis, workflow improvement, project coordination, reporting, and team enablement.

CORE SKILLS

- Business Process Improvement
- Requirements Gathering
- Stakeholder Communication
- Technical Documentation
- Project Coordination
- Process Mapping
- Workflow Analysis
- Research & Analysis
- Operational Planning
- Risk Identification
- Issue Tracking
- Meeting Facilitation
- Presentation Development
- Knowledge Management
- Quality Assurance
- Team Coordination
- Change Management

- Training & Onboarding
 - Written Communication
 - Cross-Functional Collaboration
 - Data Organization
 - Report Preparation
 - Performance Tracking
 - Problem Solving
 - Process Standardization
-

PROFESSIONAL EXPERIENCE

Senior Operations Analyst

Northstar Solutions Group — New York, NY
2022 – Present

- Coordinate operational initiatives involving product, support, finance, compliance, and engineering teams.
- Analyze existing business processes and identify opportunities for improved consistency and efficiency.
- Create detailed process documentation, workflow diagrams, operating procedures, and internal reference materials.
- Facilitate requirements-gathering sessions with internal stakeholders.
- Translate business requests into structured requirements and actionable project tasks.
- Maintain centralized documentation for recurring operational activities.
- Develop reporting frameworks to help management monitor project progress and outstanding issues.
- Assist with quarterly planning and prioritization exercises.
- Track project milestones, dependencies, risks, and deliverables.
- Coordinate meetings between technical and non-technical stakeholders.
- Prepare executive summaries and project status reports.
- Review operational metrics and identify recurring sources of delay or inefficiency.
- Assist managers with onboarding plans for new team members.
- Develop internal training materials and knowledge-base articles.
- Establish standardized procedures for recurring administrative and technical workflows.
- Support audits by organizing documentation and evidence.
- Maintain issue logs and coordinate follow-up activities.
- Identify gaps between documented procedures and actual operational practices.
- Collaborate with subject-matter experts to improve internal documentation.
- Help teams establish clearer ownership of recurring processes.
- Participate in continuous-improvement initiatives across multiple departments.

Business Systems Coordinator

Meridian Professional Services — Boston, MA
2018 – 2022

- Worked with business teams to understand operational challenges and define practical improvements.

- Created process maps for finance, customer support, sales operations, and internal administration.
- Maintained project documentation and decision logs.
- Coordinated cross-functional working groups.
- Prepared weekly and monthly operational reports.
- Supported management with data collection and trend analysis.
- Documented business requirements for internal systems.
- Assisted with user acceptance testing and issue verification.
- Coordinated communication between internal users and technical teams.
- Developed standard operating procedures for newly introduced workflows.
- Maintained internal knowledge repositories.
- Assisted in the development of training programs for new processes.
- Conducted interviews with employees to understand recurring workflow problems.
- Created presentations summarizing findings and recommendations.
- Helped establish standardized naming conventions and documentation practices.
- Monitored outstanding action items and followed up with responsible stakeholders.
- Supported organizational change initiatives.
- Assisted project managers with scheduling, status tracking, and risk documentation.
- Reviewed business requests for completeness before escalation to technical teams.
- Participated in process-review meetings and documented decisions.

Operations Specialist

Harbor Point Consulting — Philadelphia, PA
2015 – 2018

- Managed recurring operational tasks across several internal departments.
- Maintained spreadsheets, reports, schedules, and operational records.
- Prepared weekly status updates for department leadership.
- Coordinated meetings and documented action items.
- Created reference guides for frequently performed processes.
- Assisted with employee onboarding and internal training.
- Helped organize departmental knowledge and documentation.
- Investigated recurring administrative issues and proposed improvements.
- Supported quality-control activities.
- Maintained records of incidents, requests, and follow-up actions.
- Coordinated with external vendors when required.
- Helped standardize internal forms and templates.
- Assisted with annual planning activities.
- Prepared presentations for internal meetings.
- Performed basic data analysis and reconciliation.
- Helped teams establish more consistent operational procedures.

SELECTED PROJECTS

Enterprise Process Standardization Initiative

Led documentation and standardization efforts across multiple departments.

Responsibilities included:

- Interviewing process owners
- Mapping existing workflows
- Identifying duplicate activities
- Documenting ownership and escalation paths
- Creating standardized operating procedures
- Developing implementation checklists
- Coordinating stakeholder reviews
- Tracking adoption
- Maintaining the resulting knowledge base

Result: Helped establish a common operating framework used by multiple business units.

Internal Knowledge Management Program

Designed and organized a centralized internal knowledge structure covering policies, procedures, troubleshooting guides, onboarding materials, and frequently asked questions.

Responsibilities included:

- Content organization
- Documentation standards
- Searchability improvements
- Review workflows
- Ownership assignment
- Content lifecycle management
- User feedback collection

Cross-Department Reporting Initiative

Created a recurring reporting process that consolidated information from several departments into a common management format.

Responsibilities included:

- Defining reporting requirements
- Standardizing terminology
- Establishing reporting schedules
- Validating submitted information
- Preparing executive summaries
- Identifying recurring trends
- Tracking unresolved issues

EDUCATION

Bachelor of Science in Business Administration

Northeastern State University
2011 – 2015

Relevant coursework:

- Business Analysis
- Organizational Behavior
- Operations Management
- Information Systems
- Project Management
- Statistics
- Business Communications
- Strategic Management
- Financial Analysis

CERTIFICATIONS & TRAINING

- Professional Project Coordination Certificate
- Business Process Analysis Certificate
- Technical Writing & Documentation Program
- Advanced Excel Training
- Agile Fundamentals
- IT Service Management Fundamentals
- Organizational Change Management
- Data Visualization Fundamentals
- Workplace Communication Certificate

TOOLS & GENERAL TECHNOLOGIES

- Microsoft Excel
 - Microsoft Word
 - Microsoft PowerPoint
 - Microsoft Teams
 - SharePoint
 - Google Workspace
 - Jira
 - Confluence
 - Service management platforms
 - Collaboration platforms
 - Documentation systems
 - Reporting dashboards
 - Spreadsheet-based analytics
 - Workflow management tools
 - Diagramming and process-mapping software
-

ADDITIONAL STRENGTHS

Communication

Comfortable communicating with executives, managers, technical specialists, business users, vendors, and external partners. Experienced in adjusting communication style according to the audience and translating complex subjects into accessible language.

Documentation

Strong emphasis on clear, maintainable documentation. Experienced in producing procedures, technical notes, requirements documents, project summaries, meeting records, implementation guides, and knowledge-base content.

Organization

Experienced in managing competing priorities, coordinating multiple workstreams, maintaining detailed records, and ensuring that deadlines and follow-up actions remain visible.

Analysis

Strong analytical approach to identifying patterns, evaluating processes, investigating recurring problems, and developing practical recommendations.

Collaboration

Comfortable working independently or as part of multidisciplinary teams. Experienced in facilitating discussions where stakeholders have different priorities or interpretations of requirements.

PROFESSIONAL ACHIEVEMENTS

- Reduced recurring process ambiguity by introducing standardized operating procedures.
 - Improved visibility into cross-department projects through centralized reporting.
 - Helped reorganize internal documentation used by multiple teams.
 - Created onboarding materials adopted by several departments.
 - Established repeatable procedures for tracking operational issues.
 - Supported successful implementation of multiple internal process changes.
 - Improved stakeholder communication through structured status reporting.
 - Helped identify and eliminate duplicated administrative activities.
 - Developed reusable templates for requirements gathering and project planning.
 - Contributed to the creation of department-wide documentation standards.
-

FINAL TECHNICAL ENVIRONMENT

The following technologies represent additional infrastructure and engineering experience that complements the business, operations, and process-focused background described above:

- **Amazon Web Services (AWS)** — Experience working with cloud-based environments, infrastructure concepts, IAM, networking fundamentals, compute resources, storage, monitoring, and deployment workflows.
- **Kubernetes** — Familiarity with container orchestration, clusters, deployments, services, configuration management, scaling concepts, and troubleshooting workloads in distributed environments.
- **CI/CD** — Experience with continuous integration and continuous delivery practices, automated build processes, testing workflows, deployment pipelines, release automation, and environment promotion.
- **Docker** — Containerization, image management, container-based development and deployment workflows.
- **Infrastructure as Code** — Familiarity with declarative infrastructure management and repeatable environment provisioning.
- **Git** — Version control, branching strategies, pull requests, merge workflows, and collaborative development practices.
- **Linux** — Command-line administration, system troubleshooting, process management, permissions, logs, and basic shell scripting.
- **Monitoring & Observability** — Familiarity with application and infrastructure metrics, logging, alerting, dashboards, and incident investigation.
- **Cloud Networking** — Understanding of virtual networks, subnets, security controls, routing concepts, and service connectivity.
- **Containerized Applications** — Experience supporting application workloads packaged and deployed as containers.
- **Release Management** — Familiarity with versioned releases, deployment approvals, rollback procedures, environment management, and post-release verification.

TECHNICAL SUMMARY

Cloud: AWS

Containers: Docker, Kubernetes

Delivery: CI/CD, automated deployments, release pipelines

Version Control: Git

Operating Systems: Linux

Infrastructure: Cloud infrastructure, networking, infrastructure automation

Observability: Logging, metrics, monitoring, alerting

Engineering Practices: Automation, deployment management, configuration management, troubleshooting
